NWA WOOD DESIGN

Table planning worksheet

Bring these notes to a conversation with Jeff. Use inches throughout so the room, tabletop and chairs can be compared.

Measure your dining space

Measure between the walls or furniture that actually bound the table area. Mark anything that needs room to open, such as a door or buffet drawer.

Usable length (in.)

Usable width (in.)

Door swings, furniture and walkways to keep clear

Try the outline with your chairs

Mark each tabletop outline on the floor. Pull a chair back as if you were standing up, then walk behind it. Measure the narrowest gap you would actually use.

Option A: length × width (in.)

Narrowest gap with chair out (A, in.)

Option B: length × width (in.)

Narrowest gap with chair out (B, in.)

Plan the seating and base together

Count the people who eat here most days and the guests you want to fit. Note where each chair sits in relation to the legs or base.

Everyday seats / seats with guests

Chair style or width of an existing chair (in.)

Preferred shape, base and where knees need clearance

Bring a starting point to the shop

Design name or inspiration photo

Wood, color or finish you like

Which outline worked best? What should Jeff help you decide?
